

Software Architecture 2024[2026]

Lecture 4, part 1/2

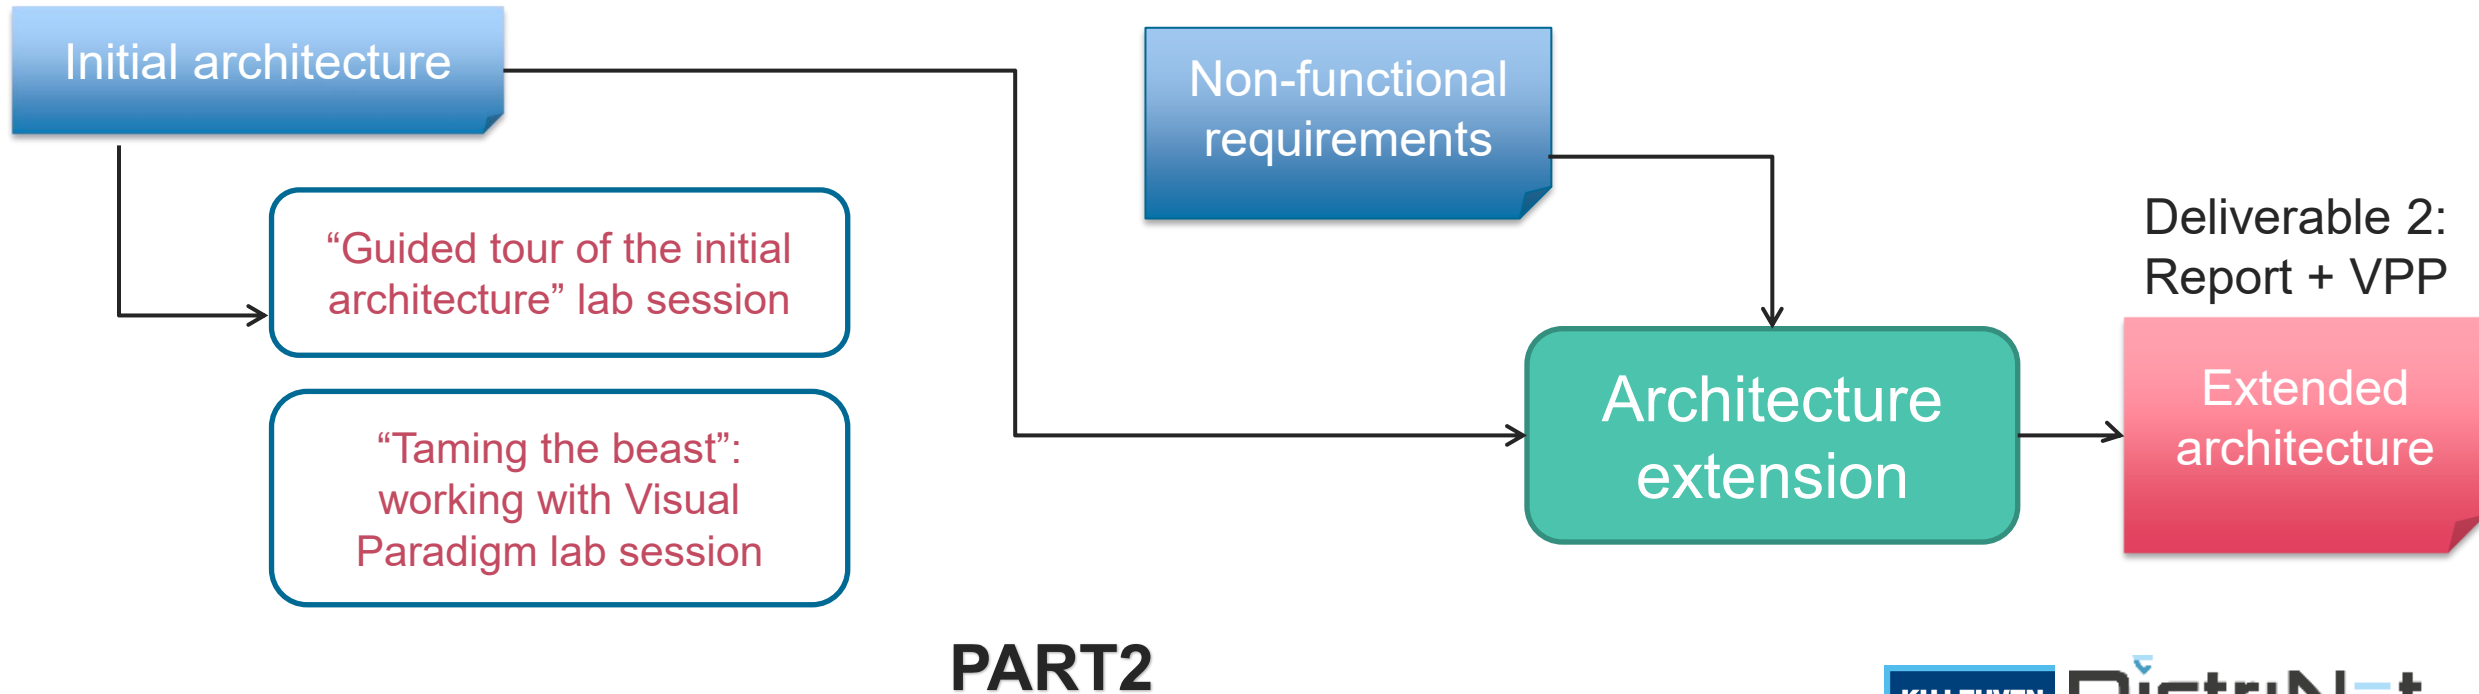

Introduction

Dimitri Van Landuyt

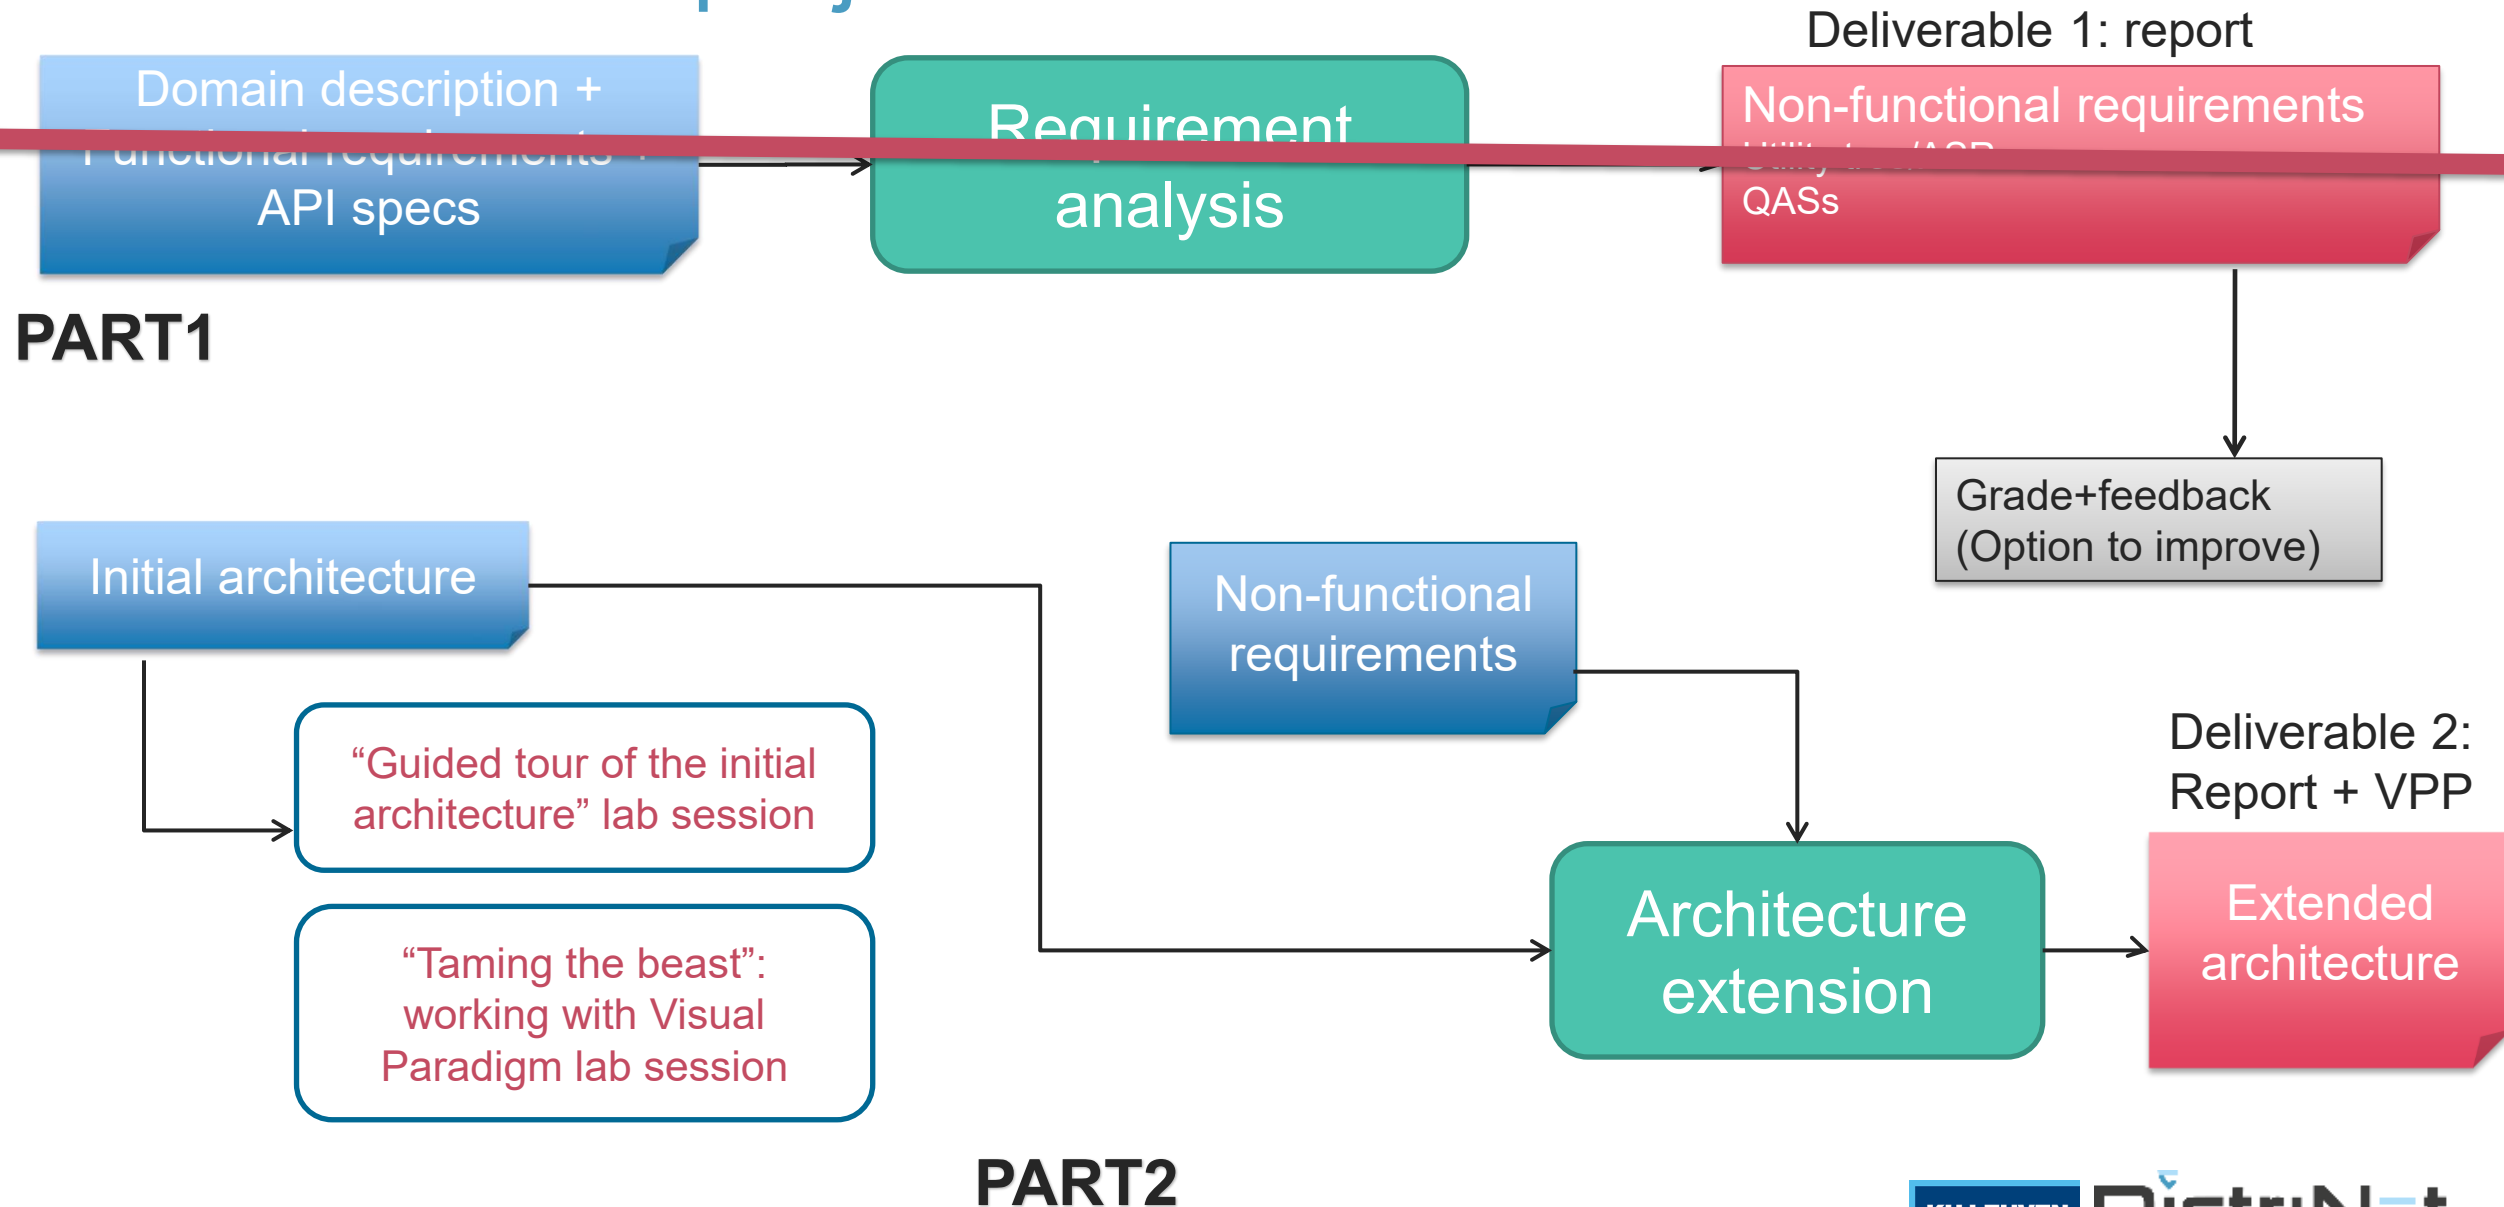

Laurens Sion

Wouter Joosen

Timeline of the project

Timeline of the project

On Upcoming VP lab session

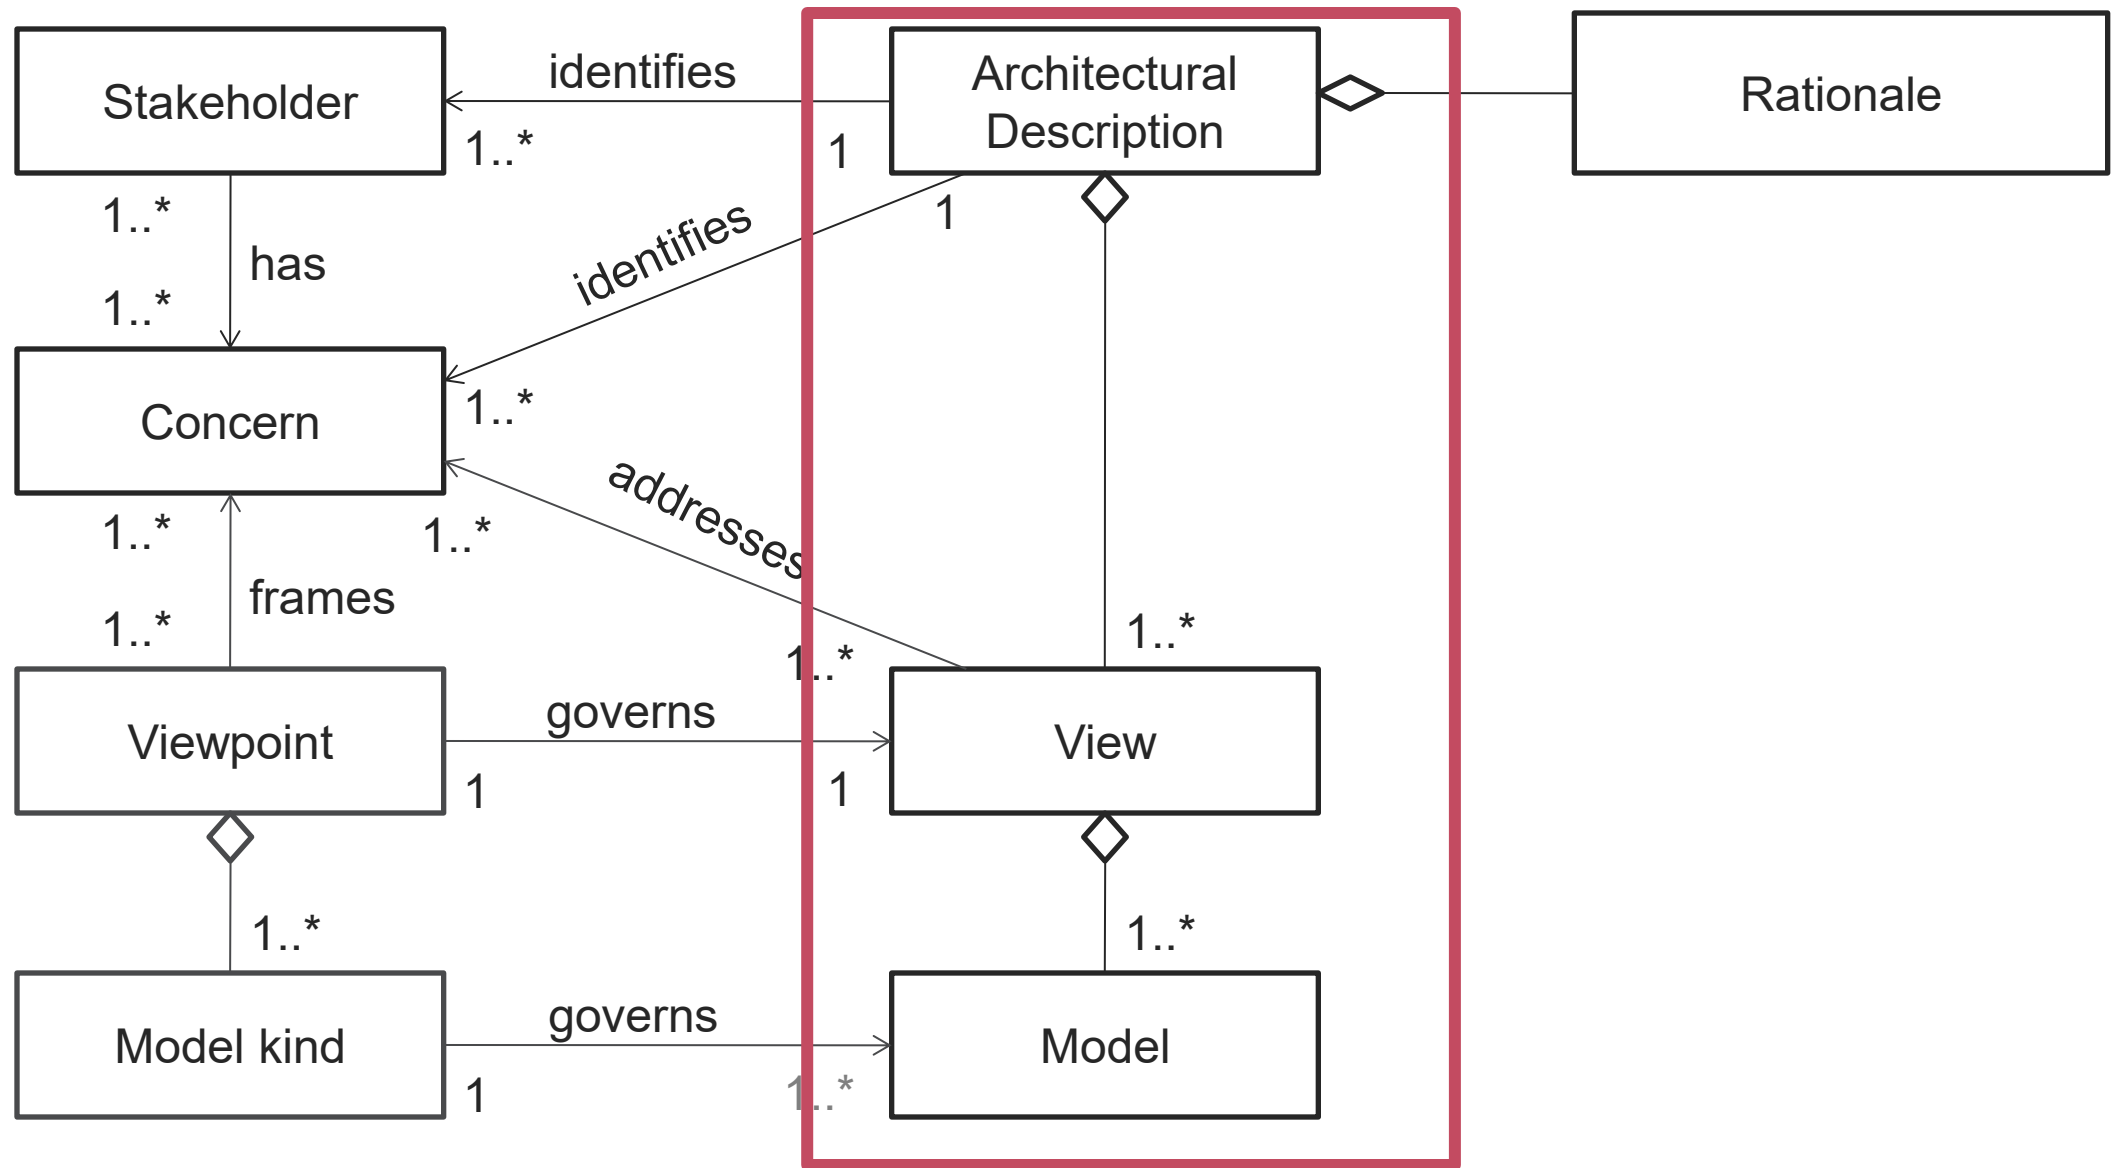

[09/03]:: Get to know Visual Paradigm – a MUST

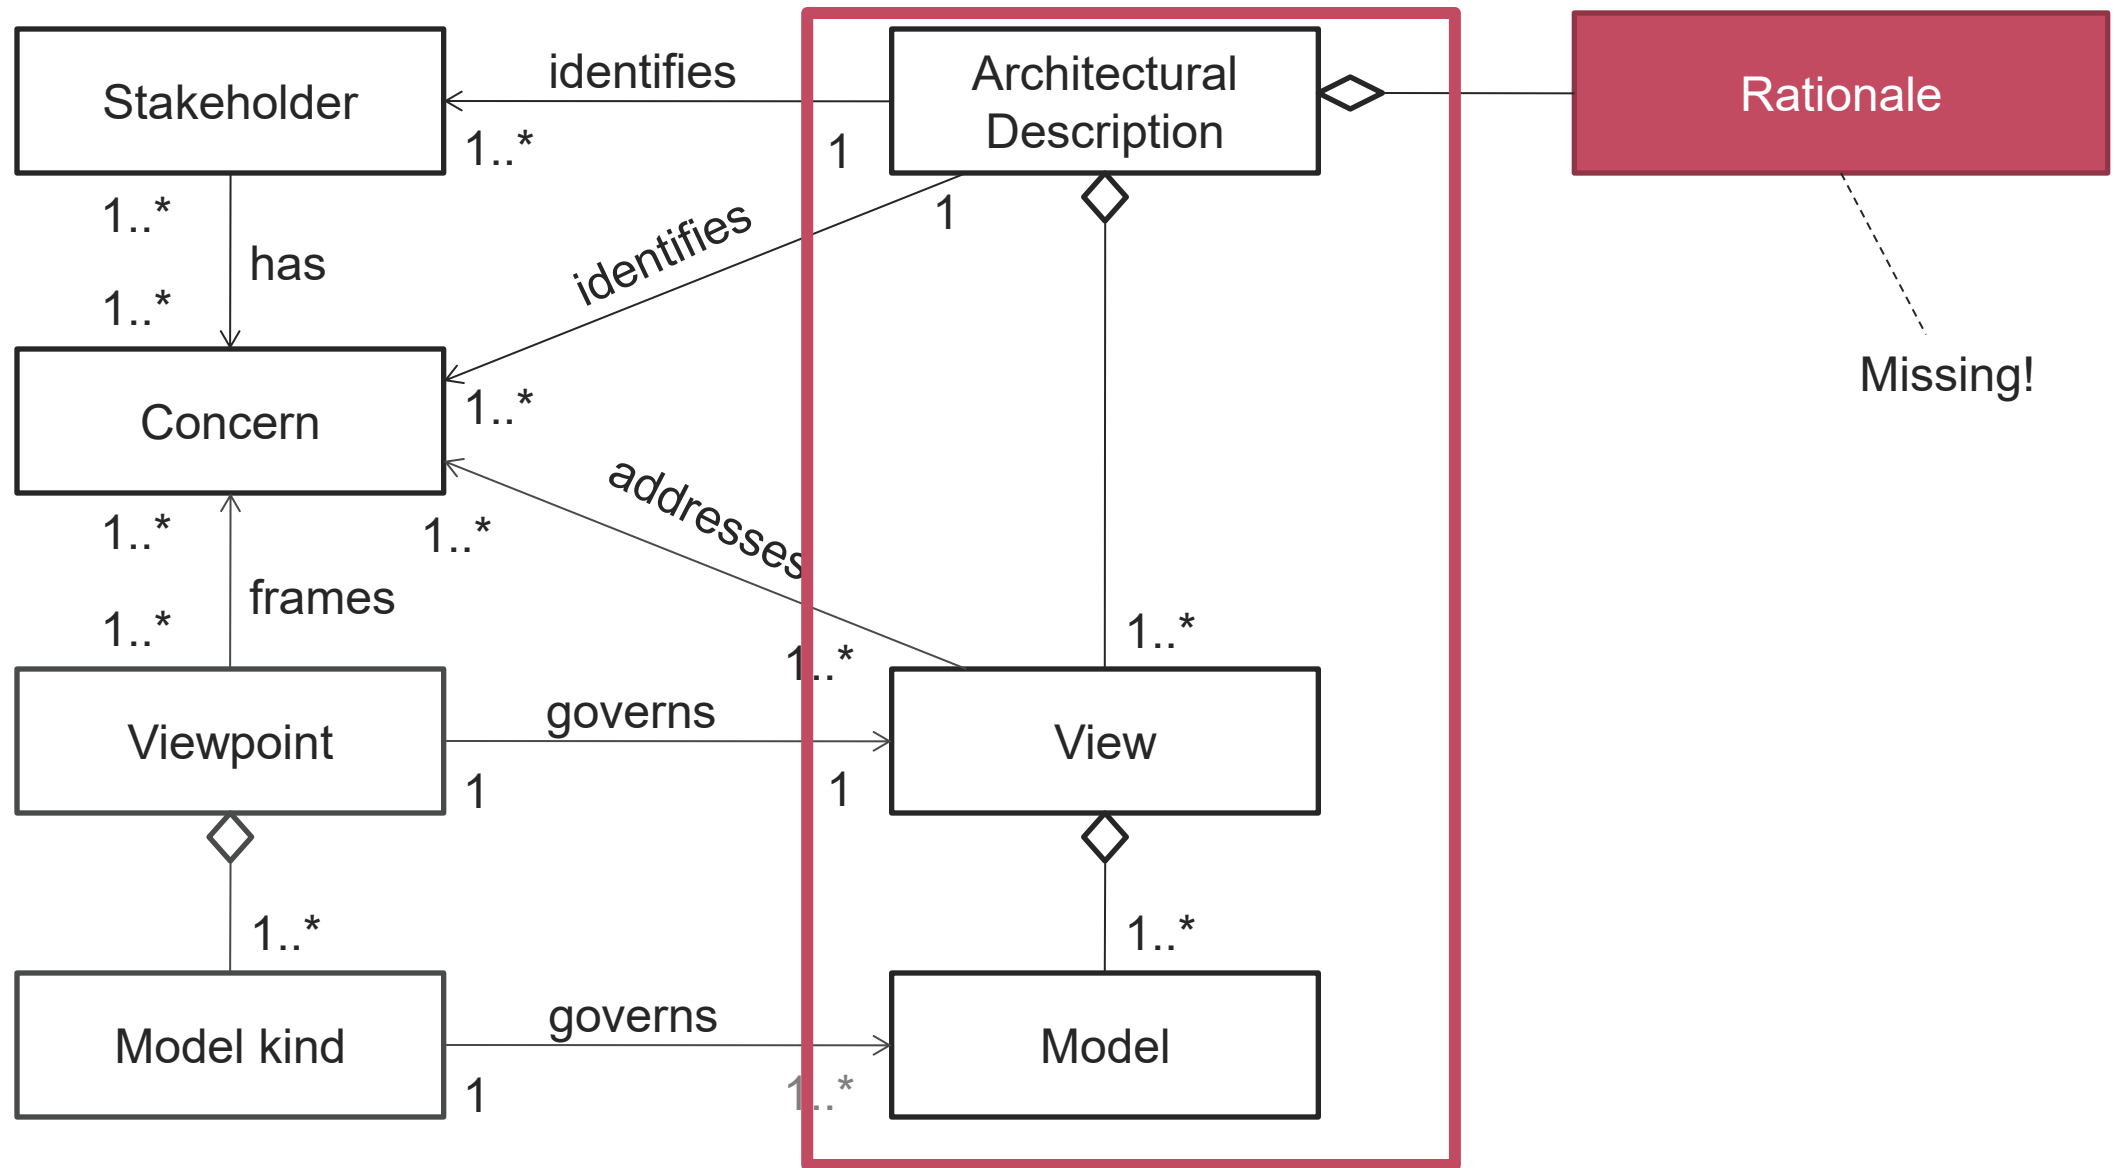

[week 16/03] - Getting to know the initial PMS architecture

To be finished before 23/03: start of Phase 2

Lab session - storyline

- › Initial PMS software architecture is documented **properly**
 - › Client-server view, decomposition view, process view, deployment view, element catalog
 - › VPP file, model and diagram
 - › Exported readable report
 - › Descriptions of components, roles, responsibilities, ..
- › Software architecture is ... *a set of views/diagrams?*

- › **Rationale, principles** and **decisions** are not documented
 - › We can see the outcome of the decision making process; the decisions are there but they are 'compiled away'
 - › This will hinder us as we will continue development

yet .. architect overboard

... perform '**Architecture reconstruction**' (extremely lightweight version of it)

Positioning

› Lab session is tailored to:

1. **Understanding** the initial architecture

- Views, notation, etc

2. **Recognizing architectural decisions**

- Which requirements have been addressed already?
- What has been the architectural impact of these requirements

You will **extend** it in **part 2**

We are doing the foundational work
Proper understanding is essential

[Get to know Visual Paradigm on Mondag 09/03
A MUST DO!]

Lecture plan

1. Course introduction
2. Quality requirements and architectural significance
3. Software architecture: defined
- 4. Architectural views**
5. Architectural models
- ...

Lectures

1. Course introduction
2. Quality requirements and architectural significance
3. Software architecture: defined
4. **Architectural views**
5. Architectural models
- ...

- 
1. System context
 2. **Architectural views (intro)**
